FOR IMMEDIATE RELEASE

EM Holdings' ePCR App for the iPad Saves Firefighters and EMTs Time and Stress through Easy, Accurate and Secure Patient Care Reporting

EL DORADO HILLS, Calif. – EM Holdings*, a leading healthcare software provider in the United States, has expanded into the mobile platform market with its ePCR patient care reporting application for the iPad. Designed for ambulance and fire services, the app was developed using a paramedic's perspective in order to ensure that reporting was as quick, easy accurate, and seamless as possible.

ePCR is fully Gold compliance certified by the National Emergency Medical Services Information System, so users may collect and export data without fear of deviating from the NHTSA Version 2.2.1 EMS Dataset and XML standards. The app's continuous quality improvement feature allows CQI managers to review records, flag data and privately communicate reporting issues to personnel in the field via an internal messaging system. All PCRs are securely stored on remote servers so that data is never lost.

The software includes an extensive array of features for streamlining the reporting process such as digitally stored signatures and a built-in fax module. Users also have the option of customizing features such as report form fields and templates, treatment lists and user security roles. An optional pre-billing module allows for the review of PCRs prior to submitting them to a billing company so that users can identify and fix errors right up to the last minute, increasing collection percentages.

ePCR comes with unlimited technical support, revisions, upgrades, and installation assistance. Training for first responders, administrators, managers, and billing personnel is also included. For more information about the app's features and implementation, visit www.mPCRems.com/beta.

About EM Holdings
Since 1983, EM Holdings has offered cutting-edge office automation software solutions for chiropractors, medical doctors, podiatrists, and ophthalmologists, and more. Among its offerings is the ePCR application, a total advanced life support and basic life support solution for on-scene and transport patient care.
